

Economic Research Center

Economic Research Center (ERC) aims to conduct in-depth and comprehensive research to analyze the current economic landscape, formulate evidence-based recommendations for enhancing economic policy and promoting sustainable development, and identify innovative solutions for effective economic management and growth. Additionally, the ERC provides analytical materials designed to support the advancement of various sectors within the economy.

The primary objectives of Economic Research Center are as follows:

- Conducting Scientific Research-engaging in the systematic analysis of existing challenges and structural issues within various sectors of the economy.
- Developing Policy Recommendations-providing evidence-based recommendations for the enhancement and optimization of state economic policy, derived from comprehensive research and analysis.
- Supporting Sustainable Economic Growth-facilitating the implementation of strategies and measures aimed at achieving long-term, balanced, and inclusive economic development.
- Education and Professional Development- organizing educational and training programs aimed at enhancing knowledge and competencies in the field of economics.
- Monitoring and Forecasting- observing and analyzing changes in the economic environment, conducting predictive research, and preparing analytical reports to inform decision-making.
- Collaboration with Public and Private Institutions- promoting effective cooperation between government agencies, private sector entities, and research institutions to support the implementation of joint economic initiatives.

Research Area of Economic Research Center:

- Studying the key socio-economic challenges facing society and assessing the future development trajectories of the national economy.
- Investigating the transformation of the economic structure amid the emergence of a new global order.

- Analyzing potential changes in socio-economic systems at national, regional, and local levels, in light of contemporary global and domestic realities.
- Exploring the relationship and balance between socio-economic development and environmental protection in modern societies.
- Conducting theoretical studies aimed at understanding and conceptualizing models of civilizational progress and development.
